Thank you for buying my music!

There are 2 versions of each audio file, "1st Pass" and "Loop." They work together to make the audio loop seamless when placed in that order by giving the first listen of the audio a clean and natural fade in(as well as any intro sections) and it will catch all of the tasty note tails that overlap the loop point at the start of the "Loop" version. From that point on, the "Loop" version can then loop seamlessly on its own.
